Professional Summary

Final-year B.Tech student specializing in backend development with hands-on experience in **Java**, **Spring Boot**, **microservices**, and scalable REST API development. Skilled in designing modular backend architectures, secure authentication systems, and production-ready applications with strong focus on clean code, performance optimization, and maintainable software engineering practices. Passionate about backend engineering, scalable application development, and solving complex system-level problems through practical software design.

Education

Raghu Engineering College, Visakhapatnam, AP

Nov 2022 – April 2026

Bachelor of Technology in Computer Science and Engineering

– CGPA: 8.20/10.0

Technical Skills

Languages: Java, Python, SQL

Backend Frameworks: Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate

Databases: PostgreSQL, MySQL, H2

DevOps & Cloud: Docker, AWS (Basics), Maven

Tools: Git, GitHub, Postman, Swagger UI, IntelliJ IDEA

Projects

SHOPAURA – E-Commerce Platform Backend

GitHub Repository

- Built and deployed a scalable e-commerce backend using **Spring Boot 3**, **PostgreSQL**, and **Spring Security** with JWT-based authentication and role-based access control.
- Implemented product management, search, filtering, and Cloudinary image uploads with optimized backend API design and efficient database handling.
- Containerized services using **Docker** and deployed on **AWS ECS Fargate** with **ECR** and **S3** integration.

- Designed a modular backend architecture with scalable API structure and maintainable service organization.

BLOGNEST – Microservices Blog Platform

GitHub Repository

- Developed a distributed blog platform using **Java 17**, **Spring Boot**, and **Spring Cloud** with independently deployable microservices.
- Implemented JWT authentication, API Gateway routing, service discovery using **Eureka**, and centralized configuration management.
- Integrated **PostgreSQL** and **Elasticsearch** for scalable data management and optimized search functionality.
- Managed containerized multi-service environments using **Docker Compose**.

Patient Management System – Microservices Backend

GitHub Repository

- Built a microservices-based healthcare backend system using **Spring Boot**, **Spring Cloud Gateway**, and **PostgreSQL**.
- Implemented secure JWT authentication, custom gateway filters, and centralized API routing.
- Integrated **Kafka** for event-driven analytics and **gRPC** with Protocol Buffers for inter-service communication.
- Structured the application using modular Maven multi-modules with Dockerized services and integration testing support.

Achievements & Coding Profiles

- Solved 300+ Data Structures and Algorithms problems across coding platforms.
- Strong understanding of Operating Systems, DBMS, Computer Networks, OOP, and System Design fundamentals.
- Passionate about backend engineering and scalable software architecture.
